Product Information

Bone morphogenetic protein 7 (BMP-7) is a member of the [transforming growth factor-beta \(TGF-β\) superfamily](#), a group of proteins that play key roles in regulating cell growth, survival and differentiation. BMP-7 plays a key role in the transformation of mesenchymal cells into bone and cartilage.

Qkine animal origin-free recombinant BMP-7 protein will be available soon - email ryan.weber@matriqx.com for updates.

Alternative protein names

BMP7, Bone Morphogenetic Protein 7, OP-1, Osteogenic Protein 1, Eptotermine Alfa, OP1, Qk28

Species reactivity

- human

Product Information

- >98%, by SDS-PAGE quantitative densitometry
- Animal origin-free (AOF) and carrier protein-free
- Expressed in *E. coli*
- Manufactured in our Cambridge, UK laboratories

Featured applications

- Directed chondrogenic differentiation of mesenchymal stem cells
- Directed osteogenic differentiation of mesenchymal stem cells

Further quality assays

- Mass spectrometry: single species with expected mass
- Recovery from stock vial: >95%
- Endotoxin: <0.05 EU/μg protein
