Product Information

Activins are members of the [transforming growth factor-beta \(TGF-β\) superfamily](#), a group of proteins that play key roles in regulating cell growth, survival and differentiation. *In vivo* activins exist as homodimers or heterodimers, the activin heterodimer AC is expressed in liver, testis and prostate, formation of the dimer has been shown to decrease the activity of activin A and reduce activin signaling.

Qkine animal origin-free recombinant human activin AC heterodimer will be available soon, contact ryan.weber@matriq.com for updates and pre-orders.

Alternative protein names

ActA, Activin beta-A chain, Erythroid differentiation protein (EDP), Follicle-Stimulating Hormone (FSH) releasing protein (FRP), INHBA, Inhibin beta A, Inhibin beta 1, ActC, Activin beta-C chain, INHBC, Inhibin beta C

Species reactivity

- human

Product Information

- >98%, by SDS-PAGE quantitative densitometry
- Animal origin-free (AOF) and carrier protein-free
- Expressed in *E. coli*

- Manufactured in our Cambridge, UK laboratories

Featured applications

- Cancer research

Further quality assays

- Mass spectrometry: single species with expected mass
- Recovery from stock vial: >95%
- Endotoxin: <0.05 EU/μg protein
